RAJU JILLA

CLOUD & DEVOPS ENGINEER | AWS INFRASTRUCTURE | CI/CD AUTOMATION | PLATFORM RELIABILITY

+91 9347536752 • rajujilla55@gmail.com • Hyderabad, India • linkedin.com/in/rajujilla

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 3+ years of overall IT and infrastructure experience, including 2+ years hands-on designing, provisioning, and automating AWS cloud infrastructure at production scale. Track record of owning end-to-end CI/CD pipelines, containerised workloads on Docker and Amazon ECS, and infrastructure-as-code delivery using Terraform and CloudFormation. Reduced infrastructure costs by ~40% on a live platform through architecture optimisation and Auto Scaling. Experienced in cloud security hardening (IAM least-privilege, VPC isolation), incident response, and reliability-focused engineering. Skilled in Kubernetes, Python, and Bash scripting, with monitoring, alerting, and SRE practices built on a strong foundation in IT systems support.

CORE COMPETENCIES

AWS Infrastructure Ownership • **CI/CD Automation** • **Infrastructure as Code** • **Container Orchestration** • **Monitoring & Observability** • **Incident Response & RCA** • **Cloud Security & Compliance** • **Cost Optimisation**

TECHNICAL SKILLS

Cloud Platform	AWS — EC2, VPC, IAM, S3, Route 53, ALB, ECS, Auto Scaling, Lambda, CloudWatch
CI/CD & DevOps	Jenkins, GitHub Actions, Git, GitHub, Bitbucket
Containers & Orchestration	Docker, Kubernetes (Pods, Services, ConfigMaps, Ingress, kubectl), Amazon ECS
Infrastructure as Code	Terraform (modules, remote state, workspaces), AWS CloudFormation
Monitoring & Observability	Amazon CloudWatch, Prometheus, Grafana — dashboards, alerting, RCA
Scripting & Automation	Python 3 (FastAPI), Shell / Bash
Databases	MySQL, PostgreSQL, MongoDB

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Jul 2024 – Present

SP Software Pvt Ltd | Hyderabad, India

- Owned and delivered CI/CD pipelines using Jenkins and GitHub Actions, automating build, test, and deployment across Dev, QA, and Production — eliminating manual release effort and reducing deployment lead time.
- Architected and managed production AWS infrastructure (EC2, VPC, IAM, S3, Route 53, ALB); enforced high availability, network segmentation, and cost controls across all environments.
- Led containerisation strategy using Docker and Amazon ECS, and managed Kubernetes deployments end-to-end — Pods, Services, ConfigMaps, Ingress, pod-level troubleshooting, and scaling via kubectl.
- Provisioned repeatable, version-controlled infrastructure using Terraform (modules, remote state) and AWS CloudFormation, ensuring environment parity and reducing drift.
- Implemented cloud security controls including IAM least-privilege policies, VPC private subnet isolation, and Security Group hardening — strengthening compliance posture across production workloads.
- Established observability using CloudWatch, Prometheus, and Grafana; configured alerting thresholds and conducted RCA for production incidents, maintaining documentation to prevent recurrence.
- Enforced Git branching strategies and pull request workflows across integrated repositories, maintaining code quality and enabling consistent, reliable releases.

System Administrator — Apr 2023 – Apr 2024

Sree Durga Pharma | Hyderabad, India

- Maintained and supported staff desktop systems, performing preventive maintenance, health checks, and troubleshooting for computers and peripherals.
- Installed, configured, and updated operating systems, software applications, and utilities; diagnosed and resolved hardware, software, and basic network connectivity issues.
- Provided day-to-day technical support to employees, including system configuration and access-related activities.
- Maintained system documentation, tracked recurring technical issues, and coordinated with technical teams and vendors for escalation and resolution.

PROJECT EXPERIENCE

SAFS – Cloud-Native Application Platform

Tech Stack: *AWS, EC2, Docker, Kubernetes, Terraform, PostgreSQL, NGINX, CI/CD*

- Designed and deployed a cloud-based application environment using AWS and containerized components, provisioning infrastructure with Terraform.
- Containerized services using Docker and deployed workloads on Kubernetes (Deployments, Services, ConfigMaps, networking).
- Implemented CI/CD workflows to automate application build and deployment activities, and configured PostgreSQL and NGINX as a reverse proxy.
- Applied AWS IAM, security groups, and network controls; troubleshot container, deployment, and networking issues.

Jaimax Platform | jaimax.com

Tech Stack: *AWS (VPC, EC2, ALB, Route 53, Auto Scaling, S3, IAM, CloudWatch), Docker, Amazon ECS, Terraform, MongoDB, Node.js*

- Designed and owned a secure, scalable 3-tier AWS architecture using VPC with public and private subnets — frontend on public EC2, Node.js backend and MongoDB in private subnets, eliminating direct internet exposure to application and database tiers.
- Architected traffic routing layer using Route 53 and Application Load Balancer (ALB) with SSL termination and health checks, ensuring production reliability and high availability.
- Automated full infrastructure provisioning with Terraform (modules, remote state) and containerised workloads using Docker and Amazon ECS, enabling consistent, repeatable environment builds.
- Implemented Auto Scaling groups and resource optimisation strategies — achieving approximately 40% reduction in infrastructure costs while maintaining service availability SLAs.

Cross Time Zone Scheduler | iOS Backend REST API

Tech Stack: *Python 3 (FastAPI), AWS EC2, PostgreSQL, NGINX, Gunicorn, Uvicorn, Route 53, Certbot SSL, Bash*

- Developed and deployed a production FastAPI-based REST API for cross-timezone scheduling on AWS EC2 (Ubuntu Linux), handling concurrent requests via Gunicorn and Uvicorn workers.
- Configured NGINX as a reverse proxy, enabled HTTPS via Certbot SSL, and mapped domain using Route 53 — delivering a secure, publicly accessible API endpoint.
- Ensured service continuity through background process management (nohup) and structured logging for operational monitoring and rapid incident diagnosis.
- Secured PostgreSQL database with authentication hardening and connection controls for production data integrity.

EDUCATION

Bachelor of Technology (B.Tech) — Civil Engineering Aug 2018 – Dec 2022

Malla Reddy Institute of Technology, Hyderabad

Intermediate (Class XII) Jun 2016 – Mar 2018

Sri Chaitanya Junior College
