RAJU JILLA

Cloud & DevOps Engineer | AWS Infrastructure | CI/CD Automation | Platform Reliability

+91 9347536752 | rajujilla55@gmail.com | Hyderabad, India | linkedin.com/in/raju-jilla-926071262

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 2 years of hands-on experience designing, provisioning, and automating AWS cloud infrastructure at production scale. Proven track record of owning end-to-end CI/CD pipelines, containerised workloads on Docker and Amazon ECS, and infrastructure-as-code delivery using Terraform and CloudFormation. Reduced infrastructure costs by ~40% on a live platform through architecture optimisation and Auto Scaling. Experienced in cloud security hardening (IAM least-privilege, VPC isolation), incident response, and reliability-focused engineering. Skilled in Kubernetes, Python, and Bash scripting with proven expertise in monitoring, alerting, and SRE practices.

CORE COMPETENCIES

AWS Cloud Infrastructure Ownership	CI/CD Pipeline Design & Automation	Infrastructure as Code (IaC)	Container Orchestration (K8s / ECS)
Monitoring, Alerting & Observability	Incident Response & RCA	Cloud Security & Compliance	Cost Optimisation

TECHNICAL SKILLS

Cloud Platform: AWS — EC2, VPC, IAM, S3, Route 53, ALB, ECS, Auto Scaling, Lambda, CloudWatch

CI/CD & DevOps: Jenkins, GitHub Actions, Git, GitHub, Bitbucket

Containers & Orchestration: Docker, Kubernetes (Pods, Services, ConfigMaps, Ingress, kubectl), Amazon ECS

Infrastructure as Code: Terraform (modules, remote state, workspaces), AWS CloudFormation

Monitoring & Observability: Amazon CloudWatch, Prometheus, Grafana — dashboards, alerting, RCA

Scripting & Automation: Python 3 (FastAPI), Shell / Bash

Databases: MySQL, PostgreSQL, MongoDB

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Jul 2024 – Present

SP Software Pvt Ltd | Hyderabad, India

- Owned and delivered CI/CD pipelines using Jenkins and GitHub Actions, automating end-to-end build, test, and deployment across Development, QA, and Production environments — eliminating manual release effort and reducing deployment lead time.
- Architected and managed production AWS infrastructure including EC2, VPC, IAM, S3, Route 53, and ALB; enforced high availability, network segmentation, and cost controls across all environments.
- Led containerisation strategy using Docker and Amazon ECS — authored task definitions, managed container lifecycles, and operated ECS services for production-grade application delivery.
- Managed Kubernetes deployments end-to-end: defined Pods, Services, ConfigMaps, and Ingress configurations; performed pod-level troubleshooting and scaling operations using kubectl.
- Provisioned repeatable, version-controlled infrastructure using Terraform (modules, remote state) and AWS CloudFormation, ensuring environment parity and reducing drift.
- Implemented cloud security controls including IAM least-privilege policies, VPC private subnet isolation, and Security Group hardening — strengthening compliance posture across all production workloads.
- Established observability using CloudWatch, Prometheus, and Grafana; configured alerting thresholds for CPU, memory, error rates, and latency, enabling proactive incident detection.

- Conducted root cause analysis (RCA) for production incidents, coordinated cross-team resolution, and maintained incident documentation to drive systemic improvements and prevent recurrence.
- Enforced Git branching strategies and pull request workflows across integrated repositories, maintaining code quality and enabling consistent, reliable releases.

PROJECT EXPERIENCE

Jaimax Platform | *jaimax.com*

Tech Stack: AWS (VPC, EC2, ALB, Route 53, Auto Scaling, S3, IAM, CloudWatch), Docker, Amazon ECS, Terraform, MongoDB, Node.js

- Designed and owned a secure, scalable 3-tier AWS architecture using VPC with public and private subnets — frontend on public EC2, Node.js backend and MongoDB in private subnets, eliminating direct internet exposure to application and database tiers.
- Architected traffic routing layer using Route 53 and Application Load Balancer (ALB) with SSL termination and health checks, ensuring production reliability and high availability.
- Automated full infrastructure provisioning with Terraform (modules, remote state) and containerised workloads using Docker and Amazon ECS, enabling consistent, repeatable environment builds.
- Implemented Auto Scaling groups and resource optimisation strategies — achieving approximately 40% reduction in infrastructure costs while maintaining service availability SLAs.

Cross Time Zone Scheduler | *iOS Backend REST API*

Tech Stack: Python 3 (FastAPI), AWS EC2, PostgreSQL, NGINX, Gunicorn, Uvicorn, Route 53, Certbot SSL, Bash

- Developed and deployed a production FastAPI-based REST API for cross-timezone scheduling on AWS EC2 (Ubuntu Linux), handling concurrent requests via Gunicorn and Uvicorn workers.
- Configured NGINX as a reverse proxy, enabled HTTPS via Certbot SSL, and mapped domain using Route 53 — delivering a secure, publicly accessible API endpoint.
- Ensured service continuity through background process management (nohup) and structured logging for operational monitoring and rapid incident diagnosis.
- Secured PostgreSQL database with authentication hardening and connection controls for production data integrity.

EDUCATION

Bachelor of Technology (B.Tech) — Civil Engineering — **Aug 2018 – Dec 2022**
Malla Reddy Institute of Technology, Hyderabad

Intermediate (Class XII) — **Jun 2016 – Mar 2018**
Sri Chaitanya Junior College

Secondary School Certificate (Class X) — **Apr 2015 – Apr 2016**
Radiant High School
